

User Insights

We conducted interviews with 16 students to explore their user experiences on the Meta Family Center website. The goal was to uncover initial impressions, navigation challenges, and perceptions of platform features. Then, we created affinity maps and found 9 key insights.

Design & Layout

A desire for a more **seamless transition** and flow between different sections of the website.

Users preferred getting an **overview** of features and information.

Users raised concerns about instances where the **images did not seem to align with the information** presented, leading to potential confusion on the information.

Content

Mixed opinions on the generic nature of content, especially in the education hub. Users desired more **specific details** on how Meta's features make platforms like Instagram and Messenger safer.

Users expected more **specificity** in the content, with suggestions for **short videos** and easy-to-digest formats.

Users wanted clearer **author attribution** for articles to enhance credibility.

Some users emphasized the need for **region-specific content** and consideration for diverse **cultural perspectives**.

Expectations and Understanding

Users generally felt they understood Meta Family Center's goals, but desired more **clarity** on specific details and features. For example, having **auto playing videos/ demos** showcase how Meta Family Center tools really works in action within the Meta Products.

Several users did not immediately associate Meta with the Family Center, indicating potential **gaps in brand recognition**.
